# AM-DESK

AM-DESK is an automated 3D measurement station consisting of an intelligent control system, multiple servo-mechanisms, a safety system, a motion control system, measurement and analysis software, and SPC batch analysis software. Thanks to its compact size and easy installation, the station can cater to different needs with great flexibility.

AM-DESK can be paired with different collaborative robots and Scantech's entire fleet of 3D scanners to measure numerous parts automatically. It suits well for on-site inspections on shop floors, in labs, and under harsh conditions to ensure continuous 3D measurement with high precision.

## Features

In compliance with standards of CE certification, the station ensures operators' safety with all-round methods. With versatile accessories, the station can achieve automated and uninterrupted 3D measurement for complex parts.

The station comes with powerful and easy-to-use 3D software FlexScan, which has a simple user interface to allow for smooth human-machine interaction. The software has multiple communication methods to support the functioning of various collaborative robots and enables automated measurement with multi-positioners in different scenarios.

-  **Safety Guard**
-  **Quick Installation Plug and Play**
-  **One-button Start**
-  **Diverse Accessories**
-  **Easy Programming Automated Calibration**
-  **Manual Operation Supported**

### Easy Programming Automated Calibration

Engineered with PLC and servo-mechanists system, the station can achieve programmable and automated measurement when paired with multiple collaborative robots. At the click of a button, it can conduct complex measurement tasks per preset measuring paths. Engineers and operators with different levels of expertise and programming skills can operate it with ease.

When used in an unstable environment for high-intensity operations, instruments need to be calibrated to ensure high-precision measurement results. The station can automatically calibrate its sensor after a scanning session or when the temperature changes to ensure uninterrupted measurements.

### Robust Performance

AM-DESK is the trusted 3D measurement station for various tasks whether in lab or on the shop floor. It enables fast and automated inspections for parts ranging from casting parts, plastic parts to stamping parts within 100 kilograms. Once the measurements are completed, the station can generate inspection reports automatically by comparing actual 3D coordinates and CAD data, significantly enhancing efficiency.

### Safety Guard

The station is CE marked, meeting EU's safety, health, and environmental requirements. It adopts highly safe methods, including serial arrangement for emergency stop, a buzzer to indicate potential dangers with lights and sounds, and controllable force distance with servo-mechanists to ensure safe operations. When paired with cobots, it supports 10-grade collision detection and sensor safety detection to stop the robot from operating due to abnormal or potential dangers.

## Quick Installation

The automated measurement station weighs 75 kg with a footprint of 1 square meter. This compact station can be installed within 5 minutes with 110-220 V mains electricity. When mounted on a mobile trolley, it can be moved around for quick installation. Additionally, it can work in unison with plug-and-play positioners to expand the workspace. The station can switch measurement paths instantly, thus accelerating measurements. It can also work with different cobots.

## 3D Software - FlexScan

FlexScan is an in-house developed software of Scantech designed for automated 3D measurement. It can support the functioning of robots such as KUKA, ABB, AUBO, FANUC, YASKAWA, and more.

**Product and Solution Management**

**Data Capturing and Pre-processing**

**Data Optimization and Output**

## Entire Fleet of Scantech's 3D Scanners Supported

### KSCAN

Experience Diverse Ultimate from Metrology Measurement

### TRACKSCAN

Intelligent 3D Tracking with Unrivaled-fast Measurement

### SIMSCAN

Small Is the Brand-New Big

## Technical Specifications

Type	AM-DESK 60120
Dimension	1200*600*177 mm
Weight	75 KG
Turntable Payload	140 KG
Turntable Repeatability	0.05°
Turntable Accuracy	0.1°
Max Rotational Speed of Turntable	50°/S
Communication Interface	TCP/IP
Robot Supported	UR/UR5
	AUBO/i5; i7
Power Supply	110 V~220 V/50-60 Hz
Peak Power	900 W
